

CONVERTIBLE VEHICLE WITH TOP SUPPORT STRAP

ABSTRACT OF THE INVENTION

A convertible vehicle with a moving roof having a flexible cover, in which the cover is engaged underneath by at least one strap (9), following essentially the course of the roof when the roof is closed, which is secured on support structure arranged across the roof . The at lest one end of the strap passes through a slit recess of the roof support structure and is secured against pulling out from the slit recess by an end thickening.
